BEDSIDE EMERGENCY ASSESSMENT COURSE FOR HEALTHCARE STAFF

The **BEACH** course is a one day educational programme designed to give Health Care Support Workers increased skills, knowledge and confidence in using a structured and prioritised approach in the initial recognition, assessment, care, escalation and handover of a deteriorating person within a healthcare setting.

You will gain the skills and knowledge to:

- assess a person using a structured approach, including observing and interpreting the softer signs of clinical deterioration such as changes in behaviour or routine
- recognise, respond and interpret physiological changes of deterioration in terms of their vital signs
- understand the principles of using an Early Warning Score (EWS) to detect deterioration
- act quickly to prevent further deterioration
- call for appropriate help and escalate in a timely manner
- effectively handover using a structured communication tool such as SBAR to appropriate help
